

PRICE THREE CENTS

Clever dancing will be a feature of the new Tech Show, "Over the Garden Wall." There will be a sextette of dancing girls like that in last year's production. A provisional selection of these was made Wednesday, the number of candidates being cut down to seven or eight. These men will rehearse Monday before Mrs. Francis, who will make the final selection, and drill the men selected. At the rehearsal Wednesday, the new opening chorus was sung, as well as other songs now in, and the music went with a good deal of snap. Yesterday afternoon the principals, for the first time, tried the second act of the play, and showed the possibilities of the lines in the way of humor. The dialect parts were admirably handled, and although the men had not learned their lines, the effect was, on the whole, very promising.

THE TECH

Published every Monday, Wednesday, and Friday during the college year by students of the Massachusetts Institute of Technology.

Entered as second-class matter October 6, 1904, at the post office at Boston, Mass., under the Act of Congress of March 3, 1879.

All communications regarding advertisements should be addressed to the Business Manager. Regarding subscriptions address the Circulation Manager.

Subscription - \$1.50 per year in advance. Single Copies 3 Cents.

Subscriptions within the Boston Postal District and outside of United States must be accompanied by postage.

Printed by Old Colony Press, Boston.

Friday, February 28, 1908.

A GOOD GAME.

Tomorrow evening the Basket Ball Team plays the University of Maine at the Gym. A good crowd should attend this game.

The Basket Ball Team has done good work this year even though it has received little support. In the Dartmouth game the team did well and might have been victorious if there had only been more Tech rooters. All this year the games have not been attended enough to make basket ball self supporting. Consequently the team has been helped out by appropriations from the Advisory Council. If students would financially aid athletics by attending the basket ball games and indoor meets through the winter, minor athletics would be made self-supporting and so the Advisory Council would have more money to be applied to the stimulation of general athletics.

A big crowd ought to turn out for the game Saturday. Not only will it be a good game but the team needs the help of everyone.

CIRCULATE.

The students who regards all studying as a bore, who looks upon instructors as taskmasters, who feels that any old way is good enough, hardly has the right to regard the student interested in his work as an alien. On the other hand the hard working student should not look upon as frivolous and worthless his fellow student who revels in beer-nights, theatres and society meetings. There should be no suspicion existent between the commuting day-student, the sport of Back Bay, the earnest student and the student who doesn't care.

There should be more of the feeling that each man can give to the other, that a closer communion is not only beneficial to the individual but to the Technology community.

As the New York Sun repeats from time to time, a man can educate himself by two primary actions. These are "Read" and "Circulate." Many Institute men do nothing but read, read facts, formulas, and diagrams. Others do nothing but circulate. Many of these have departed. Let the readers circulate and the circulators put on brakes.

That the big men of your class may be found in the supposed outcast horde, the "grinds," and that it would be best to cultivate the acquaintance of a few of these very human individuals is shown in the following quotation from Owen Wister now famous talk on American scholarship:

"When I was in college I obeyed the instinct to flock with my feather. Forgive me if I say with regret, that those birds we used to call 'grinds' had no attraction for me; doubtless I was despised by them. It was all a mistake, a natural mistake to be sure, but one to beware of. When I look back now, I am sorry that fate or intention did not bring me more in contact with a certain 'grind' in my class whose name was George Lyman Kittredge. We must flock together if we would get the best results."

While there is a tendency at the Institute for all to be "grinds," there are a number of men who, because of greater means or advantages, are able to enter into a better social life than the day-student living in outlying districts or the average scholarship man. These should attempt to carry to their less fortunate class mates something of their social life.

On the other hand the great number of men at the Institute who have been driven to believe in the infallibility of books should stop a moment to consider that the great problems in after life will be human problems, that

the greatest men not only know facts but also men.

As Wister says "We must flock together more if we would get the best results" for the individual and for the community.

INVESTIGATIONS IN PHYSICO-CHEMISTRY.

(Continued from page 1.)

dertaken by Professor H. M. Goodwin and Dr. H. T. Kalmus.

The general scheme of qualitative analysis developed by Professor A. A. Noyes and Dr. W. C. Bray is being extended to include the detection of the acids.

Other investigations begun in previous years on the hydration and the true transference numbers of the ions, on the electromotive force produced in a solution by rotating it at a very high speed, and on properties of metals in liquid ammonia, are being brought to a successful conclusion.

Mr. C. A. Kraus, who is carrying on the last named investigation, has succeeded in finding the missing link between the metallic and the electrolytic conductor, and he has thus obtained a new point of attack for the problem of the electron.

During the past year a gift of \$500 has been received from the William E. Hale Research Fund, and one of \$3000 from a private source in support of the work of the laboratory.

In addition, Professor A. A. Noyes has received a grant of \$2000 from the Carnegie Institution for assistance in carrying on the researches on the conductivity of aqueous solutions.

TURBINES DISCUSSED.

Mr. Charles B. Burleigh of the General Electric Company spoke on the steam turbine before the regular meeting of the Society of Arts last night. His talk included a brief historical sketch of the development of the turbine, an explanation of its action and descriptions of numerous installations. The subject was well illustrated by lantern slides.

TWO PRIZES SET.

(Continued from page 1.)

jects assisted by a number of professors from the Department of Architecture. The judges from the society are J. R. Coolidge, Jr., W. C. Appleton, C. N. Cogswell, Allen W. Jackson, Calvin Kiessling, J. L. Little, Jr., William S. Parker, E. Putnam, Jr., and George C. Shattuck.

The men in the competition are: (regular students) Ralph J. Batchelder of North Cambridge; Harry H. Bentley of Oskaloosa, Iowa; Chalmers S. Clapp of Dorchester; Russell G. Crane of Taunton; W. Fred Dolke of St. Louis, Mo.; Howard S. Hazen, Jr., of La Salle, Ill.; Rinker Kibbey of Marshfield Hills; Hugo F. Kuelme of Austin, Texas; Paul W. Norton of Woburn; Frank J. Robinson of Boston; Frederic B. Schmidt of Westfield; Aram Torossian of Norwich, Conn.; Edgar I. Williams of Rutherford, N. J.; and Conrad Youngerman of Des Moines, Iowa; (special students) Chester A. Brown of Swampscott; Stiles O. Clements of Dover, Del.; H. D. Chandler, Boston; Alexander M. Emerson of Hyde Park; Chester Cook Ford of South Boston; John M. Hutton of Des Moines, Iowa; Joseph McGinnis of Dorchester; Peter F. Laughlin of Pittsfield; Maurice P. Meade of Brookline; Thomas Owings of Baltimore, Md.; Clifford H. Preston of Farmington, Me.; Edwin M. Price of Brookline; Walter D. Reed of Oakland, Cal.; John R. Tabor of Houston, Texas; John R. Thordike of Boston; Kurt Vonnegut of Indianapolis, Ind.

By constant study and development on the part of the authorities in the course in architecture the high position which the Institute course holds has been greatly strengthened. One of the greatest aids in the placing the work of students before the architects and public and in keeping in touch with the department it graduates has been the Technology Architectural Record started last year.

This quarterly is published under the auspices of the Architectural Society with the aid of the professors in the course. It contains in each number cuts of the prize drawings, or thesis drawings by the students, news of the architectural graduates, translations from various foreign works on architecture and news of the architectural world. It is of so high a standard that it is being used by the Institute as

a prospectus of the work done in the course in architecture.

The officers of the society are: president, E. I. Williams 1908; vice-president, Kurt Vonnegut 1908; secretary, H. H. Bentley 1908; treasurer, H. D. Chandler 1908. The publication committee that is intimately connected with the publication is made up of W. F. Dolke, Jr. 1908 chairman; E. B. Schmidt 1908, L. H. King 1909. Prof. Harry W. Gardner takes especial interest in the publication.

Another part of the work in increasing the scope of the department has been the participation of the authorities of the course in the various conventions of the American Institute of Architects. This society at its fortieth convention at Washington in January gave active evidence of its interest in the architectural schools through its committee on architectural education.

As expressed in the committee's report: "Through co-ordination, a unification of standards, and co-operation, we believe that in a few years the education offered in this country might be looked upon as final except for the absolutely necessary element of study and cultivation through travel and research amongst the inimitable monuments of the pagan and Christian past."

The result of the acceptance of this report was a meeting held by the committee in New York in May following, to which were invited the heads of the architectural schools of Columbia, Cornell, Pennsylvania and the Institute. They all responded.

The most tangible results of that meeting was to inaugurate a system of competitions between the schools, and the experiment was made to hold the first one during the summer vacation. The difficulty of control of vacation work has proved, however, that it is not practicable to carry out this plan, and at another meeting last month it was decided to have the competitions a part of the school curriculum. Preparations are now being made to accomplish this.

DEAN BURTON WAS SPEAKER.

Dean Burton was the speaker at a recent meeting of the Bowdoin College Christian Association. His address was on the subject of "Honor in College," and was one in a series on the problems of the college man.
